

Quick Activity 1

1. Identify the inputs, and output.

Input	Processes	Output
Number of milkteas bought	Total price for milkteas	Total amount to pay
Number of cookies bought	Total price for cookies	Change to receive
Amount of cash handed to the cashier	Total cost from cash given to find change	

2. Divide the problem into smaller tasks. Write the tasks in their correct order.

- Start
- Get the number of milkteas purchased
- Get the number of cookies purchased
- Get the total payment given by the customer
- Multiply milkteas by price per cup (P80)
- Multiply cookies by price per piece (P25)
- Add milktea cost and cookie cost together
- Subtract total cost from the payment to find change
- Show total cost and change
- End

3. Present your solution using either pseudocode or a flowchart.

```
START
  READ milkTeas, cookies, payment
  teaCost = milkTeas * 80
  CookieCost = cookies * 25
  totalCost = teaCost + cookieCost
  change = payment - totalCost
  PRINT totalCost
  PRINT change
END
```

4. Perform a dry run using both test cases below. Show each calculation and the resulting values.

Step	Variable	Calculation	Result
1	teaCost	$2 \times \text{₱ } 80$	₱ 0
2	cookieCost	$4 \times \text{₱ } 25$	₱ 100
3	totalCost	$\text{₱ } 160 + \text{₱ } 100$	₱ 260
4	change	$\text{₱ } 500 - \text{₱ } 260$	₱ 240

Total Cost: ₱260

Change: ₱240

Step	Variable	Calculation	Result
1	teaCost	$1 \times \text{₱ } 80$	₱ 80
2	cookieCost	$2 \times \text{₱ } 25$	₱ 50
3	totalCost	$\text{₱ } 80 + \text{₱ } 50$	₱ 130
4	change	$\text{₱ } 200 - \text{₱ } 130$	₱ 70

Total Cost: ₱ 130

Change: ₱ 70
